

1. AI Engineer Intern – Google

Company Overview: Join Google's AI team to contribute to real-world research projects involving computer vision and NLP.

Key Responsibilities:

- Assist in developing ML models for search and speech recognition.
- Preprocess large datasets for model training and validation.
- Collaborate with senior researchers to evaluate model accuracy.

Required Skills: Python, TensorFlow, PyTorch, Data Preprocessing, NLP, Deep Learning

Qualifications: Pursuing B.E/B.Tech in AIML, CS, or related field.

2. Machine Learning Engineer – Microsoft

Company Overview: Work on developing scalable ML pipelines for Microsoft Azure AI services.

Key Responsibilities:

- Implement supervised and unsupervised ML algorithms.
- Optimize model training performance for large datasets.
- Assist in deployment using Azure ML Studio.

Required Skills: Python, Scikit-learn, Azure ML, Model Optimization, Data Analysis

Qualifications: Bachelor's degree in Computer Science, AIML, or equivalent.

3. Data Analyst Intern – Infosys

Company Overview: Contribute to Infosys' analytics division by assisting in data visualization and model interpretation.

Key Responsibilities:

- Clean and analyze structured/unstructured datasets.
- Develop dashboards and insights for business reports.
- Work with predictive analytics tools and ML APIs.

Required Skills: Excel, Python, Power BI, Pandas, SQL, Data Visualization

Qualifications: B.Tech in AIML, Data Science, or related discipline.

4. AI Research Intern – IBM

Company Overview: Participate in IBM Research projects involving NLP and speech synthesis.

Key Responsibilities:

- Support model training using transformer architectures.
- Document experiments and maintain model versioning.
- Contribute to research papers and technical reports.

Required Skills: NLP, Transformers, Hugging Face, PyTorch, Research Writing

Qualifications: Pursuing a degree in AI/ML or equivalent field.

5. Deep Learning Intern – NVIDIA

Company Overview: Join NVIDIA's AI team to work on GPU-accelerated deep learning models.

Key Responsibilities:

- Train neural networks on large image datasets.
- Assist in optimizing models for GPU computation.
- Collaborate on computer vision and autonomous systems tasks.

Required Skills: CNN, GPU Computing, PyTorch, CUDA, Computer Vision

Qualifications: Bachelor's in AIML, ECE, or related field.

6. NLP Engineer – Amazon

Company Overview: Work on developing text and speech understanding systems for Alexa and AWS NLP services.

Key Responsibilities:

- Develop and fine-tune NLP models using Hugging Face Transformers.
- Perform entity recognition and intent classification tasks.
- Collaborate with linguists to improve model understanding.

Required Skills: NLP, Hugging Face, Python, BERT, Transformers, Data Cleaning

Qualifications: Bachelor's in AIML, Linguistics, or Computer Science.

7. AI/ML Intern – TCS (Tata Consultancy Services)

Company Overview: Assist TCS's innovation lab in building intelligent systems using ML and data science techniques.

Key Responsibilities:

- Perform data wrangling, feature selection, and model testing.
- Implement classification and regression models.
- Support model deployment using Flask or Streamlit.

Required Skills: Python, Scikit-learn, Streamlit, Flask, Data Preprocessing

Qualifications: Final-year student in AIML or Computer Science.

8. Data Science Intern – Deloitte

Company Overview: Join Deloitte's data science team to work on predictive analytics and business intelligence models.

Key Responsibilities:

- Analyze large datasets and create visualizations for insights.
- Assist in developing regression and classification models.
- Document findings for client reports.

Required Skills: Python, Pandas, Matplotlib, Power BI, Machine Learning

Qualifications: B.E/B.Tech in AIML, Data Science, or related area.

9. Computer Vision Intern – Meta (Facebook)

Company Overview: Contribute to AR/VR visual perception research at Meta's Reality Labs.

Key Responsibilities:

- Work on image segmentation and object detection models.
- Collect and annotate image datasets for model training.
- Assist with AR-based model integration testing.

Required Skills: OpenCV, PyTorch, CNN, Image Processing, AR/VR

Qualifications: Bachelor's degree in AIML, ECE, or Computer Vision specialization.

10. AI Intern – Accenture

Company Overview: Collaborate with Accenture's AI practice to design intelligent automation systems.

Key Responsibilities:

- Assist in RPA + ML integration for business workflows.
- Develop chatbots and recommendation systems.
- Test model deployment and performance evaluation.

Required Skills: ML, RPA, Chatbots, Python, TensorFlow, Data Analysis

Qualifications: Pursuing a degree in AIML, IT, or Computer Science.
