

Job Title: AI/ML Engineer

Description: Build ML models, preprocess data, deploy AI systems.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills

Job Title: Data Scientist

Description: Analyze datasets, build predictive models, visualize insights.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills

Job Title: Deep Learning Engineer

Description: Work on CNNs, RNNs, Transformers, model optimization.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills

Job Title: NLP Engineer

Description: Develop NLP pipelines, LLM-based apps, text analytics.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills

Job Title: Computer Vision Engineer

Description: Image processing, object detection, segmentation.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills

Job Title: MLOps Engineer

Description: Deploy ML models, automate pipelines, monitor systems.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills

Job Title: Data Engineer

Description: Build ETL pipelines, manage big data systems.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills

Job Title: Research Engineer

Description: Experiment with SOTA models, write research code.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills

Job Title: AI Product Developer

Description: Integrate ML models into applications, API development.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills

Job Title: Business Analyst (AI Domain)

Description: Requirement analysis, dashboards, model interpretation.

Responsibilities:

- Work with datasets
- Build and evaluate models
- Collaborate with teams
- Research and optimize solutions

Skills Required:

- Python, ML basics
- Good problem-solving skills
